## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 19-32 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or suggest to combine a gas laser composed of two chambers, one for producing a seed light and another for amplifying a seed light. Oscillating capacitor is used to control the light output from an amplifying stage. The laser also includes control electronics comprising monitor modules that monitors the energy of the seed light and amplified light. The measured results of the monitor modules is used to control amplified light, such that the pulse energy to laser light becomes the target energy for the amplification stage and the value of pulse energy of the amplified light saturates when the pulse energy to the seed light increases. The prior art cited, but not relied upon by the examiner includes the following US patents 7,095,773 and 6,567,450 that disclose similar two-stage gas laser systems, but do not disclose the specific monitoring and energy controlling mechanism as described in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
